

# Product Overview

## Low Intensity Taxiway Reflector

600 2T

LITR 6002T – Blue-Green-Orange-Yellow-Red

### Suggested Uses

Civil Aviation	Healthcare Facilities
Commercial Aviation	Forestry
Police	Oil & Gas Operations
Military	

### OVERVIEW

The model 600-2T is a cost effective alternative to traditional taxiway/apron/hazard lighting. The Model 600-2T is unique due to the fact that if the reflective surface is damaged by snow removal or grass cutting equipment, only the reflective vinyl sleeve needs replacement.

The main column is composed of rigid PVC conduit ensuring durability in all weather conditions.

The retro-reflective sleeve provides superior visibility during night time operation and will ensure the user has clear visibility of each location desired at extreme distances.

Other comparable markers must be replaced completely. With the wide variety of mounting styles available, the 600-2T is readily adaptable to any number of temporary or fixed applications. All aviation colours, specialty fluorescent, custom lengths and colour combinations are available.

### DIMENSIONS & CHARACTERISTICS

Available in any colour.

- Removable Reflective Sleeve
- Extremely Visible - Even Infrared
- Omnidirectional
- Frangible and Durable
- OAH 600 mm (24"), OD 60 mm (2.375")
